Agentforce Revenue Management

Revenue Management Intelligence offers a comprehensive suite of Tableau Einstein dashboards to assess revenue strategies and achieve cost-effective results. Integrated with Data 360, the dashboards feature detailed data visualizations and analysis of key performance indicators, enhancing the efficiency of revenue strategies. Revenue Management (formerly Revenue Cloud)uses analytics across all functional areas of Revenue Management to create a smarter, more efficient product-to-cash solution.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Unlimited**, and **Developer** editions with Revenue Management, formerly Revenue Cloud.

To use the Billing Analytics feature, you must have the the Revenue Cloud Advanced license and the Revenue Cloud Billing license of Revenue Management (formerly Revenue Cloud). Contact your Salesforce account executive for more information.

Note The portions of the Services and features branded as Tableau Einstein are provided on separate infrastructure: (i) may involve privacy and security protections that are different than your other services; (ii) may be hosted in physical locations that are different than your other services; and (iii) are further described in the Salesforce Trust and Compliance Documentation. This feature requires Customer has a Customer Data Cloud subscription and consumes Data Services Credits.

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

USER PERMISSIONS NEEDED	
To install the Revenue Management Intelligence dashboards (Permission Sets can be added during setup):	Data Cloud Architect AND

	USER PERMISSIONS NEEDED
	Data Pipeline Base User AND Any admin or design time user permission set in Revenue Management
To use Revenue Management Intelligence:	Any admin or design time user permission set in Revenue Management AND Tableau Next Limited Consumer

The Revenue Management Intelligence setup creates custom dashboards for each functional area of Revenue Management. These dashboards provide real-time guidance for sales reps, leverage transactional data for insights, and enable revenue and profitability monitoring.

Note As of October 14, 2025, Data Cloud has been rebranded to Data 360. During this transition, you may see references to Data Cloud in our application and documentation. While the name is new, the functionality and content remains unchanged.

Set Up Revenue Management Intelligence

To access dashboards and analytics for all functional areas in Revenue Management (formerly Revenue Cloud) workstreams, set up Revenue Management Intelligence.

Install Revenue Management Intelligence Apps

After your Revenue Management Intelligence data is ingested into Data 360, you're ready to install the apps to help you get insights on all your product-to-cash data generated in Revenue Management (formerly Revenue Cloud).

Revenue Management Intelligence Dashboards

Use the analytics dashboards for Revenue Management (formerly Revenue Cloud) to gain comprehensive visibility into your revenue operations across billing, pricing, order management, and subscription business models. These dashboards consolidate key performance metrics into actionable visual insights, empowering sales, finance, and operations teams to track trends, optimize revenue processes, and make data-driven decisions. Each analytics app provides targeted dashboards designed to highlight critical data for specific roles and functions within the revenue lifecycle.

Set Up Revenue Management Intelligence

To access dashboards and analytics for all functional areas in Revenue Management (formerly Revenue Cloud) workstreams, set up Revenue Management Intelligence.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise**, **Unlimited**, and **Developer** editions with Revenue Management, formerly Revenue Cloud.
To use the Billing Analytics feature, you must have the the Revenue Cloud Advanced license and the Revenue Cloud Billing license of Revenue Management (formerly Revenue Cloud). Contact your Salesforce account executive for more information.

USER PERMISSIONS NEEDED	
To view the setup page for Revenue Management Intelligence:	User is System Admin Any admin or design time user permission set in Revenue Management

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

Note The Analytics Apps and Template functionality included as a part of Tableau Einstein is available in English only.

To set up Revenue Management Intelligence, create and map Data 360 assets and ingest Data 360 data. Use the Revenue Management Intelligence guided setup to configure Data 360 and the analytics features for each Revenue Management workstream

1. From Setup, in the Quick Find box, enter *`Revenue Management Intelligence`*, and then select **Revenue Management Intelligence Setup**.
2. Build your Data 360 connection.
3. Configure access to Revenue Management Intelligence.
4. Deploy the Revenue Management Intelligence data kit.
5. Install Revenue Management Intelligence apps.

Build your Data 360 Connection

Configure your Data 360 connection for Revenue Management (formerly Revenue Cloud).

Configure Access to Revenue Management Intelligence

Assign permissions to view and manage Revenue Management Intelligence.

Deploy the Revenue Management Intelligence Data Kit
To view components such as data streams, calculated insights, and data graphs from Data 360, deploy the Revenue Management Intelligence data kits from Data 360 in your Salesforce org.

Build your Data 360 Connection

Configure your Data 360 connection for Revenue Management (formerly Revenue Cloud).

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise**, **Unlimited**, and **Developer** editions with Revenue Management, formerly Revenue Cloud.
To use the Billing Analytics feature, you must have the the Revenue Cloud Advanced license and the Revenue Cloud Billing license of Revenue Management (formerly Revenue Cloud). Contact your Salesforce account executive for more information.

USER PERMISSIONS NEEDED	
To access Data Cloud Setup:	Data Cloud Architect

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

1. To check if Data 360 is enabled on your Salesforce org, from Setup, in the Quick Find box enter *Data Cloud Setup*, and select **Data Cloud Setup Home**.
   If Data 360 is enabled, you'll see details regarding your Data 360 instance on your home org along with your Salesforce org details. If it isn't enabled, in the Set Up Data Cloud section click **Get Started** to set up Data Cloud.
2. To enable data exchange between your Salesforce org and Data 360, connect Data 360 to your Salesforce org.
   a. From Setup, in the Quick Find box, enter *Salesforce CRM* and select **Salesforce CRM**.
   b. Click **New**.
   c. Click **Connect to a Salesforce org**.
   d. After your org is connected, verify that the connection is visible and active.
3. To organize and manage your Data 360 data, use a data space. You can use the default data space in your Salesforce org. To create a new data space:
   a. In Setup, find and select **Data Spaces**.
   b. Click **New** to create data spaces.

Configure Access to Revenue Management Intelligence

Assign permissions to view and manage Revenue Management Intelligence.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise**, **Unlimited**, and **Developer** editions with Revenue Management, formerly Revenue Cloud.

To use the Billing Analytics feature, you must have the the Revenue Cloud Advanced license and the Revenue Cloud Billing license of Revenue Management (formerly Revenue Cloud). Contact your Salesforce account executive for more information.

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

USER PERMISSIONS NEEDED	
To ingest objects and fields:	Data Cloud Architect AND View All Records and Read permission on the object being ingested. AND Data Cloud Salesforce Connector

In your Salesforce org, assign Read and View All permissions to the Data Cloud Salesforce Connector permission set to ingest data from different functional areas of Revenue Management (formerly Revenue Cloud).

1. From Setup, in the Quick Find box, enter *Permission Sets* and select **Permission Sets**.
2. Select **Data Cloud Salesforce Connector**.
3. To update the system settings to ingest Revenue Management data, select **System Permissions**.
4. Select **Edit**.
5. To ingest Salesforce Pricing data, enable access to the these system permissions.
   a. Salesforce Pricing: Run time user
   b. Create Orders from Quotes
   c. Manage Revenue Cloud
6. To ingest Dynamic Revenue Orchestrator data, enable access to the **System Administrator access for DRO** system permission.
7. To ingest Billing data, enable access to these permission sets.

a. Configure Billing Settings
b. Create Orders from Quotes
c. Manage Billing
d. Manage Billing Access
e. Manage Revenue Cloud
f. Run Data Processing Engine Definitions for Billing
g. View All Data
h. View All Fields (Global)

8. Save your changes.
9. To grant Read and View All Records permissions to all objects and fields in the Revenue Management Intelligence data kit, from Apps, select **Object Settings**.
10. Select the object that you want to ingest into Data 360.
11. To change the object permissions, select **Edit**.
12. Under Object Permissions, select the **Read** and **View All Records** permissions for the object.
13. Under Field Permissions, select **Read Access** for all the fields associated with the object.
14. Save your changes.
15. Similarly, modify the permissions for all the objects that you want to ingest into Data 360.

Data 360 Objects

object type	name	functional area
Data Model Object (DMOs)	• Accounts • Asset, Asset Actions • Asset Action Sources • Asset State Periods • Categories, Cost Books • Cost Book Entries • Currency Types • Orders • Order Products • Price Books, Products • Product Category Products • Product Selling Models • Quotes • Quote Line Items • Users	Salesforce Pricing
Data Model Object (DMOs)	• Fulfillment Step Dependencies • Fulfillment Steps • Fulfillment Step Sources • Sales Transaction Fulfillment Requests	Dynamic Revenue Orchestrator

object type	name	functional area
Data Model Object (DMOs)	• Accounting Periods • Billing Milestone Plans • Billing Milestone Plan Items • Billing Policies • Billing Schedules • Billing Schedule Groups • Billing Treatments • Billing Treatment Items • Billing Schedule Group Relationships • Capture Payments • Credit Memos • Credit Memo Lines • Credit Memo Line Taxes • Invoices, Invoice Address Groups • Invoice Batch Runs • Invoice Documents • Invoice Lines • Invoice Line Taxes • Legal Entities • Legal Entity Accounting Periods • Payments, Payment Terms • Payment Term Items • Revenue Transaction Error Logs • Tax Policies • Tax Treatments	Billing

Note To use Data Governance features, grant permissions to the listed objects per your chosen policy according to Assign Data Access. If you have more than one data space, you must grant access to objects in each data space. Object names in non default data spaces follow the convention of <DataSpace Prefix>_<Object Name>.

Deploy the Revenue Management Intelligence Data Kit

To view components such as data streams, calculated insights, and data graphs from Data 360, deploy the Revenue Management Intelligence data kits from Data 360 in your Salesforce org.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise**, **Unlimited**, and **Developer** editions with Revenue Management, formerly Revenue Cloud.
To use the Billing Analytics feature, you must have the the Revenue Cloud Advanced license and the Revenue Cloud Billing license of Revenue Management (formerly Revenue Cloud). Contact your Salesforce account executive for more information.

USER PERMISSIONS NEEDED	
To deploy the data kit components:	Data Cloud Architect

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

The data kit bundles that you find are based on your functional area in Revenue Management (formerly Revenue Cloud). Use these data kits to create data streams that connect your Salesforce org to Data 360. Data streams help you install data bundles which contain stream source objects.

1. From the App Launcher, find and select **Data Cloud**.
2. Select **Data Streams**.
3. Click **New**.
4. Select **Salesforce CRM**, and then click **Next**.
5. Select a Salesforce org to deploy the data kit.
   You can select either the current org or a companion org.
6. Choose the relevant data bundles under Standard Bundles that align with your functional area in Revenue Management.
   a. To use Subscription Analytics and Pricing Analytics, select **Asset Bundle** and **Pricing Bundle**.
   b. To use Dynamic Revenue Orchestrator Analytics, select **DRO Bundle**.
   c. To use Billing Analytics, select **Common Billing Bundle** and **Advanced Billing Bundle**.
   You must install the data bundles individually.
7. Click **Next**.
8. Verify the objects under your selected bundle, and click **Next**.
9. Then, verify the fields associated with the objects in the bundle, and select **Next**.
10. Select a data space, and click **Next**.
11. Verify that the data model objects for the selected bundle are available and click **Deploy**.
12. Similarly, deploy the remaining bundles included in your data kit.

Delete a Companion Connection

Install Revenue Management Intelligence Apps

After your Revenue Management Intelligence data is ingested into Data 360, you're ready to install the apps to help you get insights on all your product-to-cash data generated in Revenue Management (formerly Revenue Cloud).

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise**, **Unlimited**, and **Developer** editions with Revenue Management, formerly Revenue Cloud.
To use the Billing Analytics feature, you must have the the Revenue Cloud Advanced license and the Revenue Cloud Billing license of Revenue Management (formerly Revenue Cloud). Contact your Salesforce account executive for more information.

USER PERMISSIONS NEEDED	
To install Revenue Management Intelligence apps:	Data Cloud Admin AND Any admin or design time user permission set in Revenue Management

Important Before you install Revenue Management Intelligence, refresh all data streams. On each data stream's page, select **Refresh Now** and wait until the status of each data stream changes to Success for Last Run. After the initial run of the data streams, the Salesforce CRM connector conducts full and incremental refreshes on a set schedule, and you don't need to refresh them manually again.

1. From Setup, in the Quick Find box, enter *Revenue Management Intelligence*, and then select **Revenue Management Intelligence Setup**.
2. To install Pricing Analytics, in the Pricing Analytics section, select **Install**.
   When you install the Pricing Analytics app, a new Pricing Pulse app is added to your org. The Pricing Pulse app is preloaded with the pricing dashboards to help you with your pricing decisions. To view the installed app, you need the Pulse Runtime User permission set.
3. To install DRO Analytics, in the Dynamic Revenue Orchestrator Analytics section, select **Install**.
4. To install Billing Analytics, in the Billing Analytics section, select **Install**.

The installation process can take up to 10 minutes. If the Revenue Management Intelligence app fails to install, use the App Hub tool in Setup to delete the app. Open App Hub and delete the required app. Wait a few minutes, then check the status under App Install History in Setup to confirm the app is completely deleted before restarting the Revenue Management Intelligence setup.

Revenue Management Intelligence Dashboards

Use the analytics dashboards for Revenue Management (formerly Revenue Cloud) to gain comprehensive visibility into your revenue operations across billing, pricing, order management, and subscription business models. These dashboards consolidate key performance metrics into actionable visual insights, empowering sales, finance, and operations teams to track trends, optimize revenue processes, and make data-driven decisions. Each analytics app provides targeted dashboards designed to highlight critical data for specific roles and functions within the revenue lifecycle.

REQUIRED EDITIONS

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Use Billing Analytics Dashboards

Billing Analytics dashboards provide a comprehensive view of billing operations within Revenue Management (formerly Revenue Cloud), enabling organizations to monitor invoicing efficiency, payment trends, and account-level billing behavior. Designed to support finance and operations teams, the Overview and Invoices dashboards, grouped under the Billing Central dashboard, offer real-time visibility into revenue recognition, billing health, and outstanding receivables. Access the dashboards from the Billing Central homepage.

Use Order Management Analytics Dashboards

Monitor and manage order fulfillment performance, prioritize actions, and proactively address issues across the order lifecycle by using the order management analytics dashboards. Each dashboard is designed for a specific persona and operational need within the fulfillment process. Access the dashboards from the Dynamic Revenue Orchestrator (DRO) homepage.

Dynamic Revenue Orchestrator Analytics

After installing the Dynamic Revenue Orchestrator (DRO) Analytics app, you can use the delivered Tableau dashboards: Order Analysis and Order Details. While DRO fulfills the orders, monitor the processing from the dashboards.

Use Pricing Analytics Dashboards

The dashboards in the Pricing Analytics app help finance and analytics teams to make informed, data-driven decisions that optimize pricing strategies. By using these dashboards, businesses gain valuable insights into the impact of pricing decisions, enhance margin management, and align pricing strategies with broader business objectives. Access the dashboards and analytic tools from the Pricing Pulse homepage.

Use Subscription and Revenue Lifecycle Analytics Dashboards

The Subscription and Revenue Lifecycle Analytics dashboards offer insights into key metrics such as renewals, churn, and customer engagement. Users can analyze trends, understand retention patterns, and optimize renewal strategies for long-term revenue growth. By providing detailed data on customer

behavior and product usage, these dashboards reduce churn and improve subscription success. The dashboards provide a complete view of subscription performance across different customer lifecycle stages. Access the dashboards from the Tableau Next app.

Use Billing Analytics Dashboards

Billing Analytics dashboards provide a comprehensive view of billing operations within Revenue Management (formerly Revenue Cloud), enabling organizations to monitor invoicing efficiency, payment trends, and account-level billing behavior. Designed to support finance and operations teams, the Overview and Invoices dashboards, grouped under the Billing Central dashboard, offer real-time visibility into revenue recognition, billing health, and outstanding receivables. Access the dashboards from the Billing Central homepage.

REQUIRED EDITIONS

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions with the Revenue Management Advanced license and the Revenue Management Billing license. Contact your Salesforce account executive for more information.

Overview

Use the Overview dashboard to track and analyze the overall billing performance, customer behavior, and booked revenue health of your organization. This dashboard provides a high-level view of essential billing metrics such as revenue, net receivables, and invoicing trends.

Invoices

Use the Invoices dashboard to track invoice health and performance metrics, including invoice statuses, disputes, failures, and credit memos. This dashboard helps billing teams assess the efficiency of invoice creation and settlement processes, identify bottlenecks, and take timely action to ensure smooth billing operations.

Account Insights (Embedded)

Use the embedded Account Insights dashboard on the Account page to view essential customer billing data at a glance. This dashboard provides a real-time snapshot of the customer's financial standing, helping teams make informed decisions during account interactions.

Overview

Use the Overview dashboard to track and analyze the overall billing performance, customer behavior, and booked revenue health of your organization. This dashboard provides a high-level view of essential billing metrics such as revenue, net receivables, and invoicing trends.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Filter the data in the Overview dashboard by region, account, product, and time period to get personalized and targeted analysis.

- The Revenue Recognition Overview section highlights key financial metrics including annual recurring revenue, total revenue, net receivables, number of accounts, monthly recurring revenue, invoice count, and renewal rate. Use these insights to understand overall billing performance, monitor revenue growth, and improve forecasting.
- The Billing Insights section provides charts on revenue trends and account activity based on monthly recurring revenue changes, unbilled orders, and net billed amounts. These insights help users identify billing inefficiencies, improve collection strategies, and improve revenue operation strategies.
- The Accounts and Invoices section provides charts on monthly active accounts and Days Sales Outstanding (DSO), along with counts of newly added and churned accounts. These insights help track customer base changes, assess billing efficiency, and monitor payment collection timelines.
- The Tax Generation Failure Trends section provides a time-based chart of tax calculation failures, with options to view data by month, quarter, or year. The chart helps identify patterns in tax processing issues over time, enabling teams to address root causes and improve billing accuracy.

Example A CFO can use the Overview Dashboard to monitor critical revenue metrics like Monthly Recurring Revenue (MRR), track trends in billing and account activity, and gain a clear, real-time view of the organization's billing health. This enables faster decision-making, more accurate forecasting, and improved financial oversight.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Metric	description	calculation
Annual Recurring Revenue (ARR)	Measures the annual value of all recurring revenues.	Sum of annual recurring revenue across all accounts.

Metric	description	calculation
Total Revenue	The total revenue generated from all billing transactions.	Sum of all invoice amounts.
Monthly Recurring Revenue (MRR)	Measures the monthly recurring revenue from subscriptions or services.	Sum of all recurring charges billed monthly.
Net Receivables	The total amount owed by customers after deductions for returns or allowances.	Total invoices minus any adjustments (e.g., credits).
Renewal Rate	The percentage of customers who renew their contracts or subscriptions.	(Number of renewals / Total number of customers) x 100.
Accounts	The total number of active customer accounts within the selected time period.	Count of unique active billing accounts.
Generated Invoice Count	The number of invoices created for billing during the selected time period.	Count of generated invoices
Revenue Trend	Tracks the performance of revenue over time.	Sum of revenue across periods, displayed on a time-series graph.
Accounts Trend	Tracks the performance of accounts over time.	Sum of active accounts per period.

Invoices

Use the Invoices dashboard to track invoice health and performance metrics, including invoice statuses, disputes, failures, and credit memos. This dashboard helps billing teams assess the efficiency of invoice creation and settlement processes, identify bottlenecks, and take timely action to ensure smooth billing operations.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Filter the data in this dashboard by region, account, product, and time period for a personalized and focused view.

- The Invoice Health Overview section displays key metrics such as the number of settled invoices,

generated invoice count, failed invoice runs, draft invoices, failed invoices, and revenue transaction error logs. These metrics help teams monitor the overall health of the invoicing process.
- Invoice Health section provides insights into pending invoices and their reasons, invoice failure rate, average invoice age, and tax generation failure count. This section helps identify processing delays and operational inefficiencies.
- Invoice Pipeline chart visualizes invoice progression across various stages such as cancelled, draft, in progress, and error. This helps users understand invoice flow and detect issues early in the billing cycle.
- Aging chart shows the aging of invoices by overdue amount and time, helping teams categorize invoices as on track, at risk, or critical. Filters allow users to refine the view based on invoice age and overdue status.
- Invoice Failure Reasons chart categorizing invoice failures by reason and RTEL (Revenue Transaction Error Log) category, helping users pinpoint root causes and reduce recurring issues.
- Credit Memo Status chart shows the count of credit memos by status, providing visibility into open and closed credit-related activities.
- Invoice Details table lists individual invoice records with details such as invoice ID, run date, invoice and settlement status, days open, days overdue, and aging category. This table supports detailed tracking and follow-up.

Example A Billing Manager can use the Invoices Dashboard to monitor the number of invoices generated, identify any failures, and take action on any disputes or draft invoices, ensuring smoother billing cycles.

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Metric	description	calculation
Invoices Settled	Measures the number of invoices that have been paid or closed.	Count of settled invoices.
Invoices Generated	The number of invoices generated during a billing cycle.	Count of all invoices issued.
Failed Invoices	The number of invoices that failed due to system errors or	Count of invoices that failed.

Metric	description	calculation
	other issues.	
Disputes	The number of invoices that have been disputed by customers.	Count of disputed invoices.
Failed Invoice Run	Tracks the number of failed invoice runs in the system.	Count of failed invoice batches.
Average Invoice Age	The average number of days that invoices have been outstanding.	(Sum of days outstanding for all invoices) / total number of invoices.
Invoice Failure Rate	The percentage of invoices that failed in the system.	(Failed invoices / Total invoices) x 100

Account Insights (Embedded)

Use the embedded Account Insights dashboard on the Account page to view essential customer billing data at a glance. This dashboard provides a real-time snapshot of the customer's financial standing, helping teams make informed decisions during account interactions.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

The insights are provided based on the selected account, offering a quick and comprehensive view of customer data.

- The Account Summary section shows net account balance details, including outstanding invoices, unapplied credits, and unapplied payments. This section helps users quickly understand the customer's current financial position.
- The Aging Invoices section shows total invoice count, overdue invoices, average invoice age, and invoice aging breakdown by days or overdue status. Users can filter the chart to focus on aging categories, allowing for more targeted follow-up and collection efforts.

Note To manually embed the Account Insights dashboard into an account page, open the page in the Lightning App Builder, click Edit, add the Dashboard component, select the Account Insights dashboard, and set visibility to Account pages only to maintain proper context.

Example A Sales Representative can use the Account Insights dashboard to review a customer's account balance, identify any outstanding invoices, and understand the status of credits or payments.

Metric	description	calculation
Outstanding Invoice	The total amount owed by a customer across all invoices.	Sum of all unpaid invoice amounts.
Unapplied Credits	The total amount of credit available to the customer.	Sum of unapplied credits across the account.
Unapplied Payments	The total amount of payment that hasn't been used by the customer.	Sum of unapplied payments.
Account Balance	The net balance for the customer account, combining invoices and payments.	Outstanding Balance - Available Payments and Credits.
Unpaid Invoices	The number of invoices that have not been paid by the customer.	Count of invoices with overdue status.
Overdue Invoices	The number of invoices that are overdue for payment.	Count of invoices where the due date is past and payment is pending.
Average Invoice Age	The average age of unpaid invoices.	(Sum of days overdue for all unpaid invoices) / total number of unpaid invoices.

Use Order Management Analytics Dashboards

Monitor and manage order fulfillment performance, prioritize actions, and proactively address issues across the order lifecycle by using the order management analytics dashboards. Each dashboard is designed for a specific persona and operational need within the fulfillment process. Access the dashboards from the Dynamic Revenue Orchestrator (DRO) homepage.

REQUIRED EDITIONS

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Order Analysis
Use the Order Analysis dashboard to gain real-time insights into order processing performance. Fulfillment operators can monitor critical KPIs, analyze order and task statuses, and investigate individual orders to ensure timely delivery.

Order Details (Embedded)
Use the Embedded Order Details dashboard to monitor the real-time status of a specific order directly within the order screen, enabling quicker order fulfillment and efficient management of fallout.

Order Analysis

Use the Order Analysis dashboard to gain real-time insights into order processing performance. Fulfillment operators can monitor critical KPIs, analyze order and task statuses, and investigate individual orders to ensure timely delivery.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Filter the data in this dashboard by Account Name, Product Name, Order Start Date, and Time Period to gain a personalized and focused view of order fulfillment performance.

- The Overall KPIs section in both the Orders and Tasks tabs highlights critical metrics including total orders or tasks, failed orders or tasks, and those in jeopardy. These KPIs provide a high-level snapshot of the operational health of the fulfillment process, helping teams act quickly on potential issues.
- The Order and Task Analysis section includes visual charts that display order distribution by order status and task distribution by task status. This helps fulfillment teams identify process bottlenecks, track task execution, and monitor real-time status across the fulfillment lifecycle.
- In the Milestone Analysis section, the Order Distribution by Milestone Reached chart visualizes how orders are progressing through fulfillment milestones. Users can sort this chart by step type (e.g., Manual, System) to better understand where delays or issues may be occurring.
- The Order Distribution Table provides a detailed view of individual orders. For each order number, it lists the associated fulfillment steps, jeopardy status, step state, and type. This table allows fulfillment operators to track specific order progress and identify exceptions or delays at a granular level.

Example A fulfillment manager notices a spike in Orders in Jeopardy and uses the dashboard to drill into affected milestones, identify delays, and reallocate resources to minimize fallout.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

metric	description	calculation
Total Orders	Total number of processed orders in the selected period.	Count of orders where SalesOrder.FulfillmentPlan ≠ null.
Failed Orders	Orders that encountered fatal errors during fulfillment.	Orders with at least one FulfillmentStep.state = 'Fatally Failed'.
Delayed Orders	Orders not progressing within expected SLA timelines.	Based on comparison with task/milestone SLA thresholds.
Orders in Jeopardy	Orders at risk of missing SLA or deadlines.	Count of orders where any FulfillmentStep.JeopardyStatus = 'Overdue'.
Total Tasks	Total number of fulfillment steps (tasks) across all orders.	Count of FulfillmentStep records.
Failed Tasks	Tasks that failed during execution.	Count of FulfillmentStep.state = 'Fatally Failed'.
Tasks in Jeopardy	Tasks currently overdue or flagged as high-risk.	FulfillmentStep.JeopardyStatus = 'Overdue'.
Order Fulfillment Status	Current status of orders (e.g., Activated, In Progress, Failed).	Distribution by SalesOrder.OrderOrchestrationStatus.
Fulfillment Plan Status	State of fulfillment plans linked to orders.	Distribution of FulfillmentPlan.Status.

metric	description	calculation
Task Type Distribution	Categorization of tasks by type (e.g., Manual, Auto).	Distribution of FulfillmentStep.Type.
Task Status Distribution	Status of tasks in the fulfillment process.	Distribution of FulfillmentStep.State where Type = 'Manual Task'.
Average Milestone Completion Time	Average time taken to complete milestones.	Aggregated time across all orchestration steps grouped by milestone.
Average Task Completion Time	Average time taken to complete fulfillment tasks.	ActualCompletionDate - ActualStartDate for each FulfillmentStep.

Order Details (Embedded)

Use the Embedded Order Details dashboard to monitor the real-time status of a specific order directly within the order screen, enabling quicker order fulfillment and efficient management of fallout.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Unlimited**, and **Developer** editions of Revenue Management

- The Overview section shows key performance indicators such as Days Since Open, Tasks in Jeopardy, Milestones Pending, and Tasks Pending providing a quick snapshot of an order's progress and risks, helping teams prioritize follow-ups and avoid SLA breaches.
- The Pending Fulfillment Steps chart, filterable by Step Type (e.g., Task, Milestone, Manual Step), shows which fulfillment steps are still pending, helping users quickly identify where an order is stuck and take targeted action to resolve delays.

Example A customer calls in asking about their order. A Customer Service Representative opens the embedded dashboard on the order record and quickly provides the current progress, pending milestones, and estimated delivery–resolving the inquiry without escalation.

USER PERMISSIONS NEEDED	
For fulfillment manager to configure dashboards:	Tableau Next Consumer AND Data Cloud User
For admin to configure dashboards:	Tableau Next User AND Data Cloud Admin

1. From the App Launcher, find and select **Dynamic Revenue Orchestrator**.
2. On the Dynamic Revenue Orchestrator Home page, select the Edit Page option from the Setup menu.
3. From the Standard components in the left panel, drag and drop the **Tableau Next Dashboard** into your home page layout.
4. From the Dashboard field, select **Order Analysis**.
5. Click the Add Filter button and define the filter using the Select Data Model and Field settings.
6. Save your changes and activate the dashboard.
   Similarly, you can apply the Order Details dashboard to your Order Record details page layout and configure the filters.

Use Pricing Analytics Dashboards

The dashboards in the Pricing Analytics app help finance and analytics teams to make informed, data-driven decisions that optimize pricing strategies. By using these dashboards, businesses gain valuable insights into the impact of pricing decisions, enhance margin management, and align pricing strategies with broader business objectives. Access the dashboards and analytic tools from the Pricing Pulse

homepage.

REQUIRED EDITIONS

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

Available in: Lightning Experience

Available in: **Enterprise**, **Unlimited**, and **Developer** editions of Revenue Management

Note Tableau dashboard customization requires specific Tableau licenses. Contact your Salesforce account executive for details.Pricing Analytics dashboards support only single-currency orgs. If your org uses multiple currencies, the dashboards may display incorrect data.

Overview

Use the Overview dashboard to get an overall understanding of your revenue and margin performance across different regions. Monitor key performance indicators like revenue, cost, margin, and margin percentage to identify geographical trends and assess business performance at a glance.

Revenue and Margin Forecast

Use the Revenue and Margin Forecast dashboard to forecast future revenue and margin based on historical data and current pricing strategies. This dashboard helps business leaders evaluate whether they are on track to meet their financial goals and adjust strategies accordingly.

Customer Analysis

Use the Customer Analysis dashboard to evaluate the financial contribution of key customers to your organization's overall revenue and margin. Identify your most valuable customers and understand their impact on business performance.

Product Analysis

Use the Product Analysis dashboard to assess the performance of your products and product categories from different financial perspectives. This tool helps you understand the contribution of individual products to your overall revenue, cost, and margin, enabling better product-level decision-making.

Price Volume Mix (PVM)

Use the Price Volume Mix (PVM) dashboard to perform an in-depth analysis of how changes in price, volume, and product mix impact your overall revenue and margin. Identify the key drivers behind shifts in financial performance at the product level and get actionable insights for decision-making.

Price Waterfall

Use the Price Waterfall dashboard offers a comprehensive view of the pricing flow from list price to pocket margin, helping teams understand how much value is retained after all price-related deductions.

Price Volume Trend

Use the Price Volume Trend dashboard to analyze how pricing changes affect sales volume over time, helping you make informed decisions on pricing strategy and overall sales performance.

Overview

Use the Overview dashboard to get an overall understanding of your revenue and margin performance across different regions. Monitor key performance indicators like revenue, cost, margin, and margin percentage to identify geographical trends and assess business performance at a glance.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Filter the dashboard data based on country, state, primary industry, account type, account name, category name, product name, and report date to customize the data to your specific analysis needs.

- The Key Metrics section shows current revenue, current cost, current margin, and current margin percentage, offering a quick snapshot of financial performance.
- The Revenue Distribution section provides visual breakdowns of revenue by country and industry, customer distribution by revenue, and product distribution by revenue. These charts are based on revenue, cost, margin, and margin percentage, helping users understand which segments are driving or hindering performance.
- The Price Details table shows detailed data by account and product, including total net revenue, revenue contribution by product, total cost, cost contribution by product, total margin, margin contribution by product, and average margin percentage. This section supports deeper margin analysis at a granular level.

Example A Sales Executive can use the Overview dashboard to evaluate revenue and margin trends across different regions, helping them identify high-performing areas and prioritize sales strategies in underperforming markets.

metric	description	calculation
Current Revenue	Total revenue generated within the selected reporting period.	Sum of revenue from all transactions in the selected time period.
Current Cost	Total cost incurred to deliver products or services in the selected period.	Sum of cost values associated with the transactions.
Current Margin	The difference between revenue and cost within the selected period.	Current Revenue – Current Cost.
Current Margin Percentage	The percentage of revenue that remains as profit after costs.	(Current Margin / Current Revenue) × 100.
Margin by Region	The margin percentage for each region.	(Total Revenue - Total Cost) / Total Revenue * 100
Revenue by Region	The total revenue across different regions.	Sum of all revenue in a given region

Revenue and Margin Forecast

Use the Revenue and Margin Forecast dashboard to forecast future revenue and margin based on historical data and current pricing strategies. This dashboard helps business leaders evaluate whether they are on track to meet their financial goals and adjust strategies accordingly.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Use filters such as country, state, primary industry, account type, account name, category name, product name, and report date to customize your forecast view.

- The Forecast chart shows projected revenue, margin, and margin percentage over time, giving users a forward-looking view of financial performance based on current data and pricing models.
- The Price Details table provides a detailed breakdown by account and product, showing metrics such as total net revenue, revenue contribution (by product), total cost, cost contribution (by product), total margin, margin contribution (by product), and average margin percentage.

Example A CFO can use the Revenue and Margin Forecast Dashboard to assess whether the current pricing strategy aligns with quarterly revenue and margin targets, and simulate the impact of potential changes.

metric	description	calculation
Revenue Forecast	Provides a forecast of future revenue based on current pricing.	Forecasted Revenue based on historical trends and price adjustments
Forecasted Cost	Expected cost to deliver products or services in upcoming periods.	Predicted total cost based on historical cost trends and forecasted volumes.
Margin Forecast	Provides a forecast of future margin based on current pricing strategy.	Forecasted Revenue - Forecasted Costs
Margin Percentage Forecast	Estimated percentage of revenue expected to be retained as profit.	(Forecasted Margin / Forecasted Revenue) × 100.

Customer Analysis

Use the Customer Analysis dashboard to evaluate the financial contribution of key customers to your organization's overall revenue and margin. Identify your most valuable customers and understand their impact on business performance.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Apply filters such as country, state, primary industry, account type, account name, category name, product name, and report date to focus the analysis on specific customer segments.

The dashboard includes four analysis tabs: Revenue, Cost, Margin, and Margin Percentage, to evaluate

customer performance from different financial perspectives.

- The Key Customers by Contribution chart visualizes top customers based on the selected metric–revenue, cost, margin, or margin percentage–to spotlight the most financially impactful accounts.
- The Trending Products for Customers displays trending products among top customers, based on revenue, cost, margin, or margin percentage. This helps identify which products are driving profitability across customer segments.
- The Price Details table shows the metrics by account and product, including total net revenue, revenue and cost contributions, total margin, margin contribution, and average margin percentage.

Example A Pricing Analyst can use the Customer Analysis dashboard to assess which customers contribute the most to profit, identify high-margin accounts, and determine which customer segments to prioritize for future pricing strategies or retention efforts.

metric	description	calculation
Customer Revenue Contribution	Total revenue generated by a specific customer.	Sum of revenue from all transactions linked to the customer.
Customer Cost Contribution	Total cost associated with serving a specific customer.	Sum of cost from all transactions linked to the customer.
Key Customer Margin %	The margin percentage contribution of top customers.	Total Margin of Key Customer / Total Margin * 100
Customer Revenue Contribution %	The contribution of each customer to overall revenue.	Customer Revenue / Total Revenue * 100

Product Analysis

Use the Product Analysis dashboard to assess the performance of your products and product categories

from different financial perspectives. This tool helps you understand the contribution of individual products to your overall revenue, cost, and margin, enabling better product-level decision-making.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Apply filters such as country, state, primary industry, account type, account name, category name, product name, and report date to narrow the analysis to specific products or product categories.

The dashboard includes four analysis tabs: Revenue, Cost, Margin, and Margin Percentage, allowing you to evaluate product performance across different financial metrics.

- The Trending Product Category chart visualizes the top product categories based on the selected metric–revenue, cost, margin, or margin percentage. This chart helps identify which product categories are driving business performance.
- The Trending Products chart shows the top products based on the selected metric–revenue, cost, margin, or margin percentage, providing insights into the most financially impactful individual products.
- The Trending Products by Discount chart shows trending products along with their average discount percentage, helping identify which products are being discounted the most and how this impacts overall performance.
- The Price Details table shows the metrics by account and product, including total net revenue, revenue and cost contributions, total margin, margin contribution, and average margin percentage.

Example A Product Manager can use the Product Analysis Dashboard to identify which products and product categories are driving the most profit, which ones need attention due to low margins, and how discounts are affecting product performance.

metric	description	calculation
Product Revenue Contribution	Total revenue generated by a specific product.	Sum of revenue from all transactions involving the product.
Product Cost Contribution	Total cost associated with delivering a specific product.	Sum of cost from all transactions involving the product.
Product Margin	Profit generated from a specific product after deducting the associated costs.	Product Revenue – Product Cost.
Product Margin Percentage	Proportion of revenue from a product that remains as profit.	(Product Margin / Product Revenue) × 100.

Price Volume Mix (PVM)

Use the Price Volume Mix (PVM) dashboard to perform an in-depth analysis of how changes in price, volume, and product mix impact your overall revenue and margin. Identify the key drivers behind shifts in financial performance at the product level and get actionable insights for decision-making.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Use filters such as country, state, primary industry, account type, account name, category name, product name, and report date to focus your analysis on specific segments or periods.

The dashboard includes two tabs: Revenue and Margin, allowing you to analyze changes from either a revenue or margin perspective. You can further refine your analysis by selecting a specific time period for comparison.

- Revenue Tab
  - Key Metrics and Values: Shows key metrics such as previous revenue, price increase, price decrease, volume increase, volume decrease, and mix, helping users understand the factors influencing current revenue levels
  - Price Volume Mix Details Table: The table shows detailed breakdowns for each product, including previous revenue, price increase, price decrease, volume increase, volume decrease, mix change, and current revenue.
- Margin Tab
  - Key Metrics and Values: Shows key metrics such as previous margin, price increase, price decrease, volume increase, volume decrease, mix, cost increase and decrease, and current margin. This allows users to analyze the margin impact from price, volume, and mix changes.

- Price Volume Mix Details Table: The table shows detailed breakdowns for each product, including previous margin, price increase, price decrease, volume increase, volume decrease, mix change, and current margin.

Example A Financial Analyst wants to understand why a particular product line's margin dropped last quarter. By using the Price Volume Mix Dashboard, they can drill down into the factors of price changes, volume fluctuations, and product mix shifts to pinpoint the cause of the margin decline.

Key Performance Indicators in Price Volume Mix Dashboard

metric	description	calculation
Previous Revenue	Revenue generated from the product or product line during the previous period.	Sum of revenue from all transactions for the selected product in the previous period.
Price Increase	The impact of any price increases on revenue for the selected period.	(New Price - Old Price) * Quantity Sold.
Price Decrease	The impact of any price decreases on revenue for the selected period.	(Old Price - New Price) * Quantity Sold.
Volume Increase	The decrease in the quantity of products sold compared to the previous period.	Previous Quantity Sold - Current Quantity Sold.
Current Revenue	Total revenue generated from the selected product or product line in the current period.	Sum of revenue from all transactions for the selected product in the current period.
Previous Margin	Margin from the product or product line during the previous period.	Previous Revenue - Previous Cost
Current Margin	Margin from the product or	Current Revenue - Current Cost

metric	description	calculation
	product line in the current period.	
Cost Increase	The increase in costs related to the product or product line for the selected period.	(Current Cost - Previous Cost) * Quantity Sold
Cost Decrease	The decrease in costs related to the product or product line for the selected period.	(Previous Cost - Current Cost) * Quantity Sold
Price Impact	Analyzes how changes in price affect overall revenue and margin.	Price Difference * Volume
Volume Impact	Analyzes how changes in volume affect overall revenue and margin.	(New Volume - Base Volume) * Base Price
Mix Impact	Analyzes how changes in product mix affect overall revenue and margin.	Change in Product Mix * Average Margin per Product

Price Waterfall

Use the Price Waterfall dashboard offers a comprehensive view of the pricing flow from list price to pocket margin, helping teams understand how much value is retained after all price-related deductions.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise**, **Unlimited**, and **Developer** editions of Revenue Management

Apply filters such as country, state, primary industry, account type, account name, category name, product name, and report date to focus your analysis on specific deals, accounts, or product segments.

The dashboard shows key metrics such as List Price, Discount, Net Price, Product Cost, and Pocket Margin based on the selected filters to visualize the pricing breakdown and margin impact.

Example A Sales Manager needs to assess the effect of pricing adjustments on a recent deal. Using the Price Waterfall Dashboard, they can quickly see how discounts impacted the margin and evaluate if the pricing strategy aligns with profitability targets.

metric	description	calculation
List Price	The standard price set for a product before any adjustments.	The baseline price before applying any discounts or rebates.
Discount	The reduction applied to the list price as part of a pricing strategy or deal negotiation.	List Price – Net Price
Net Price	The final transaction price after applying all discounts.	List Price – Discount
Product Cost	The cost to produce or deliver the product or service.	Direct cost associated with the product (e.g., materials, labor, etc.).
Pocket Margin	The profit retained after subtracting product cost from the net price.	Net Price – Product Cost
Price Waterfall	The impact of price adjustments on revenue and margin.	Revenue after each pricing step (e.g., discounts, rebates)
Discount Impact	The impact of discounts on the final price and margin.	Original Price - Discount Given

Price Volume Trend

Use the Price Volume Trend dashboard to analyze how pricing changes affect sales volume over time, helping you make informed decisions on pricing strategy and overall sales performance.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Apply filters such as country, state, primary industry, account type, account name, category name, product name, and report date to focus the analysis on specific segments.

- Price vs Volume Trend chart visualizes the relationship between average price and total quantity sold over time. By comparing price movements with volume trends month-over-month, you can quickly spot patterns such as whether price increases lead to volume drops, or if discounts are driving higher sales.
- Price vs Volume Trend Details table list the key performance metrics for the selected filters and time period.

Example A sales manager sees revenue decline despite higher average prices. Using the dashboard, they find that increased prices led to lower volumes in certain states. They adjust pricing in those regions and track improvement in sales performance.

Use Subscription and Revenue Lifecycle Analytics Dashboards

The Subscription and Revenue Lifecycle Analytics dashboards offer insights into key metrics such as renewals, churn, and customer engagement. Users can analyze trends, understand retention patterns, and optimize renewal strategies for long-term revenue growth. By providing detailed data on customer behavior and product usage, these dashboards reduce churn and improve subscription success. The dashboards provide a complete view of subscription performance across different customer lifecycle stages. Access the dashboards from the Tableau Next app.

REQUIRED EDITIONS

Note Revenue Cloud is now Revenue Management. You may see references to Revenue Cloud in Salesforce applications and documentation.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Overview

Use the Overview dashboard to monitor the current state of your subscription business, including monthly recurring revenue (MRR), active subscriptions, booking revenue, and sales rep performance trends. This view offers a consolidated snapshot of key growth metrics to help sales leaders and operations teams track revenue, identify opportunities, and assess rep performance.

Renewals and Churn

Use the Renewals and Churn dashboard to analyze customer retention and understand churn patterns by tracking key subscription renewal metrics, customer/account behaviors, and product performance over time. This tab provides granular insights into renewal trends, helping teams identify gaps in the renewal process, take proactive measures to retain customers, and reduce revenue loss due to cancellations or downgrades.

Overview

Use the Overview dashboard to monitor the current state of your subscription business, including monthly recurring revenue (MRR), active subscriptions, booking revenue, and sales rep performance trends. This view offers a consolidated snapshot of key growth metrics to help sales leaders and operations teams track revenue, identify opportunities, and assess rep performance.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Filter the dashboard data based on country, account owner, and duration to customize your visualizations.

- The Key Metrics section shows subscription metrics such as Monthly Recurring Revenue (MRR), Active Subscriptions, New Subscriptions, Booking Revenue, and Renewals, providing a snapshot of subscription health and revenue performance for the selected filters.
- The Sales Representative Performance Trend section includes a Top Sales Representatives chart showing leading and trailing reps based on key performance indicators, and a Subscription Growth Trend chart that tracks changes in active subscriptions over time. This section helps identify high performers and monitor subscription growth momentum.
- The Subscription Metrics Table presents detailed data by account or region, supporting more granular analysis of revenue trends, subscription activity, and rep performance.

Example A sales manager wants to quickly assess overall subscription health, including revenue performance and recent subscription activity across regions and product lines.

metric	description	calculation
Monthly Recurring Revenue (MRR)	Total recurring revenue generated monthly from active subscriptions.	Sum of AssetStatePeriod.MRR for active subscriptions where StartDate ≤ TODAY and (EndDate ≥ TODAY OR EndDate = NULL)
Active Subscriptions	Total number of active subscriptions currently generating revenue.	Count of unique AssetId from AssetStatePeriod where subscription is active and MRR > 0
Booked Revenue	Total revenue booked during a given time period from subscriptions.	Aggregated from AssetStatePeriod based on revenue fields aligned with NGP

metric	description	calculation
		logic
New Subscription Count	Number of new subscriptions initiated recently (e.g. last 90 days).	Count of records from AssetAction where CategoryEnum is Initial Sale or Upsells and MRRChange > 0
Renewal Count	Total number of subscriptions renewed within the selected time window.	Count of records from AssetAction where CategoryEnum = 'Renewals' and MRRChange > 0
Sales Rep Leaderboard	Ranked list of top-performing sales reps based on active subscription MRR.	Aggregate MRR by sales rep using Account.Owner or Order.PrimaryContact as applicable
Subscription Growth Trend	Trend showing monthly growth in subscription revenue over time.	Time-series chart plotting Subscription Revenue over Duration in Months from AssetStatePeriod
Subscription Details Table	Detailed list of active subscriptions with account, owner, product, and renewal information.	Data table displaying fields: Subscription ID, Account ID, Owner, Product Name, Status, Priority, Renewal Due In, Created On

Renewals and Churn

Use the Renewals and Churn dashboard to analyze customer retention and understand churn patterns by tracking key subscription renewal metrics, customer/account behaviors, and product performance over time. This tab provides granular insights into renewal trends, helping teams identify gaps in the renewal process, take proactive measures to retain customers, and reduce revenue loss due to cancellations or downgrades.

REQUIRED EDITIONS

Available in: Lightning Experience
Available in: **Enterprise** and **Unlimited** editions of Revenue Management

Filter the dashboard data based on region, account owner, product category, and time period to focus the analysis on specific customer segments and renewal cycles.

- The Key Metrics section displays core retention metrics including Customer Renewal Rate, Customer Churn Rate, and Subscription Churn Rate, offering a high-level view of renewal health and churn risk across the selected filters.
- The Performance Insights by Account or Product section provides metrics such as Total Accounts/Products, New Accounts/Products, Renewed Accounts/Products (by count and amount), and Churned Accounts/Products. Users can toggle between account- or product-level analysis to evaluate retention patterns and identify churn risks.
- The Account Growth Trend chart shows the number of accounts month-over-month, highlighting growth through new acquisitions and losses through churn, making it easier to monitor account lifecycle trends over time.
- The Top 5 Leading Accounts section highlights accounts showing the most notable changes or trends, helping teams focus retention efforts on key customers.
- The Renewal Due Details table lists details for subscriptions approaching renewal, including Subscription ID, Account ID, Owner, Product Name, Status, Renewal Due In, and Created On, enabling timely follow-up and engagement planning.

Example A sales operation manager wants to identify which accounts or products are at risk of churn and evaluate renewal performance over the last quarter.
